

Step by step growing

with Janeco-Light-Mix, ATA Terra products and Bloombastic

Products you need:

- Janeco-Light-Mix
- Atami Plugs Unit
- ATA Rootfast
- ATAZyme
- ATA Terra Leaves
- ATA Terra Max
- Bloombastic
- Plant container
- Propagator

Prepare your nutrition tank/watering can with ATA Rootfast, ATA Terra Leaves and ATA Clean and saturate the soil.

Sow the seed in the Atami Plugs Unit. When the plant is large enough you can plant them direct in a container.

When you satisfied with the root growth and the plants are well rooted, stop the use of ATA Rootfast and prepare your nutrition tank/watering can with ATA Terra Leaves, ATAZyme and ATA Clean for a strong growth cycle. Also check the soil level of the plant containers and add if necessarily Janeco-Light-Mix until the top of the plant containers.

Fill the plant container with Janeco-Light-Mix until the top of the container and press slightly.

When your plants start to bloom use ATA Terra Max, ATAZyme, ATA Clean and Bloombastic to create the bling bling and more weight for your flowers.

Place seedling or clone in the middle of the plant container if higher humidity is desired, please place the propagator on top of plant container.

If desirable increase dosage of the magnificent Bloombastic for more bling bling and even more weight for your flowers.

When the blooming phase has reach its peak please flush the last week with just water and pH 5.5.

ATA Terra grow guide

BLOOMBASTIC®

dosage on 1 litre water
0091541a

PH: 6.0 - 6.5
EC: 1.2 - 2.2

Atami Janeco-Light-Mix

Janecomix is an ideal base substrate on which virtually any crop can be grown well. The lightly fertilized soil has the advantage that even the somewhat more 'difficult' species do not become overfertilized quickly. In addition to a light dose of fertilizer, Janecomix also contains perlite, so that the substrate remains sufficiently airy and an optimum water management is created. When growing on Janecomix soil it could be that you do not need to add nutrition during the first three weeks, depending on the number of plants and size of the pots. The soil mixture contains sufficient fertilizer for the first three weeks. After this period Atami advises to add liquid fertilizer to the crop for optimal results.

ATA Rootfast

A healthy plant starts with a good developed rootsystem, more then 50% of a plant's quality and end results depends on what is below the surface. The ATA Rootfast is one of the first 100% natural biomineral root stimulator that ensures a powerful root production and increases resistance of the plant significantly due to the keen balanced NPK values. When used during the first two weeks the plant will be forced to grow more, larger and stronger roots which also ensures stability during the whole cycle.

ATAZyme

Makes the absorption of nutrition easier for the plant and reduces the risk of over-fertilization. Stimulates the substrate life and thus has an enormous positive impact on the development of the root system and growth and flowering of the crop. ATAZyme breaks down dead plants and root residues in the substrate and thus reduces the risk of substrate diseases.

ATA Terra Max

Carefully balanced, complete flowering nutrition that will provide the plant with all the necessary fertilizers during the flowering cycle. Terra Max has a positive effect on the flowering willingness of your plants. It provides beautifully compact flowers, which will increase significantly in size. Terra Max is directly soluble in water and easily absorbable by the plant. This makes the result quickly noticeable.

ATA Terra Leaves

Terra Leaves is a complete nutrition that aims specifically at the growth cycle of the plant. It ensures that the plants focus particularly on the development of large, vital branches and shoots, making the plants increase rapidly in size. Terra Leaves is directly soluble in water and easy to absorb by the plant. This makes the result quickly noticeable.

ATA Clean

Ensures that the irrigation system remains in good condition. Ata Clean prevents and removes calcium, iron phosphate and algae sediments, which guarantees an optimum irrigation. This organic cleansing means its environmentally friendly and harmless to the plant.

Wilma Propagator

- The individual plant climate controller
- Airflow adjustable system
- Ideal for seeds and cuttings
- Faster root growth
- Stronger and healthier plant development
- Indispensable on the 11 L container for the unbeatable Wilma system

Atami Plugs Unit

The Atami Plugs Unit is a natural and environmentally friendly product, made of coconut shells. This natural resource is able to recuperate rapidly and is therefore CO₂ emission-friendly.

Bloombastic

Bloombastic is a high-quality cocktail of bio-minerals and bio-stimulators that is suitable for the last flowering and ripening phase (4-6 weeks). Bloombastic increases the sugar content of your crop and therefore the weight and the smell. By means of an explosion of sugar and flower production Bloombastic provides thick, dense, sweet-smelling flowers.

Compared with other liquid flowering products, Bloombastic contains over 50% more bio-minerals (phosphorus and potassium) for which absolutely no ballast substances have been used (sodium and chlorine). Bloombastic also has an enzymatic influence in several areas, and therefore has a stress-preventing and recovering influence on the plant.
