

patented  
**Aeration Container**

**Better Than Plastic Containers!**

**Better Than Raised Beds!**

- Releases Heat
- Aerates the Root Zone
- Stops Root Circling
- Air-Prunes the Plant's Root Structure
- Great for Aquatic Plants

patented  
Aeration Container

## The Smart Pot

A New Approach To Container Gardening

### Better than plastic containers

Hard-sided plastic containers are relatively inexpensive but they are not a very good home for a plant's root structure. Plastic allows no aeration, conducts and holds heat, and provides inadequate or poor drainage. Even on mildly sunny days, container soil temperatures can easily top 120 degrees, damaging or killing the roots and stressing the plant. The #1 killer of potted or container grown plants is over watering and plastic containers with a few bottom drainage holes actually help the soil stay too wet. A **Smart Pot** is constructed of a porous fabric that allows heat to dissipate and excess water to evaporate. In fact, over-watering is never a problem because excess water drains and evaporates from all of the Smart Pot's surfaces; its walls as well as its bottom.

### Better than ceramic and clay pots

Ceramic and clay pots are better for plant growing than plastic pots. They provide somewhat better insulation keeping soil temperatures lower than plastic pots. But ceramic and clay still provide inadequate drainage and do not encourage the best root systems. Both ceramic and clay pots are heavy and can easily break. The **Smart Pot** is lightweight, inexpensive, doesn't break if dropped or frozen and can be folded so it stores easily. The **Smart Pot** also "root prunes". Ceramic and clay do not.

### Better than decorative containers

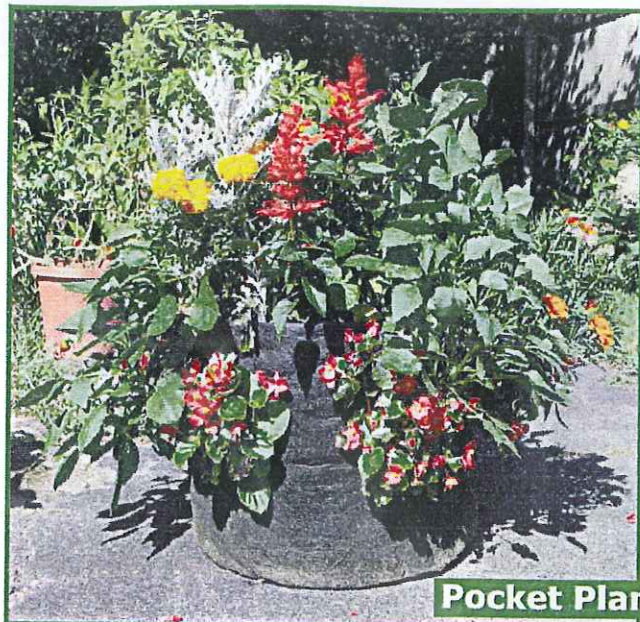

Decorative containers are just that – decorative. They are manufactured to look good and are not designed for optimum plant growth. The **Smart Pot** is designed to promote the best plant growth. It aerates, encourages masses of roots and prevents heat damage. Many customers grow in Smart Pots, then place their plant into a decorative container.

## Plant It All - Not Just The Top!

**Pocket Planting**

The **Smart Pot**'s soft-sided, fabric construction is a distinct advantage that allows you to grow plants all over the container: top, sides and bottom (hang it up). Why buy a hard-sided container that allows you to plant less than 25% of its capacity. To use the **Smart Pot** simply cut an "X" anywhere in the fabric, insert a plant, and in a short time your plants will grow into a beautiful container garden. Wonderful for strawberries or assorted herbs for a culinary kitchen garden; mix annuals with roses or grow a salad garden. With the **Smart Pot** you are only limited by your imagination not by its walls.

Traditionally, container gardeners have struggled to grow fruits, vegetables & edibles. We have had great success container growing these plants with the **Smart Pot**. The **Smart Pot** offers container gardeners a whole new look at fruits, vegetables and edibles!

**Perennials**

**Edibles**

We hope you will try some perennials in the **Smart Pots**. Even trees species are viable container garden plants with the **Smart Pots**.

In any container garden, the container you use makes a difference. We invite you to look over our web site at [www.smartpots.com](http://www.smartpots.com). E-mail us any questions. Then try the **Smart Pot** for your Smart Garden. Your plants will thank you. Their root structures will thank you.

**Happy Container Gardening!**

The patented **Smart Pot** is for the gardener who wants a container that will grow the best possible plant. It is a new and unique advancement in container technology that is better than any other method of container gardening. It is-

- > Better than Standard Black Plastic Containers
- > Better than Ceramic (Clay) Containers
- > Better than Raised Beds
- > Better than Decorative Containers

The patented **Smart Pot** is a soft-sided, fabric container that has the rigidity to hold its shape and can even support large trees. In fact, the **Smart Pot** was originally developed for and has been used by commercial tree growers for over twenty years.

The **Smart Pot** is an aeration container. It has a unique ability to air-prune and enhance a plant's root structure. A highly branched, fibrous root structure is the key to growing a better plant – with more flowers and fruits, and more resistance to insects and diseases.

In any container garden, the container you use makes a difference. Look over our web site. E-mail us questions. Then try the **Smart Pot** for your Smart Garden. Your plants will thank you. Their root structures will thank you. Aeration is the key. Happy Container Gardening!
