Sensi Zym

Sensi Zym is a super concentrate of over 80 different enzymes, each having specific functions that enhance plant and root growth (Our competitors use only a small amount of enzymes, 12 or less). Enzymes can do in seconds & minutes, what would take normal plant functions days and weeks to accomplish. Sensi Zym breaks down dead root mass, starches, carbohydrates and nutrients which accelerate plant growth as well as assist beneficial bacteria growth.

Sensi Zym enzymes help to catalyse water and assist the transfer of water elements to specific sites. Other enzymes speed up the regulatory process within the plant, and still other enzymes help in cell replication.

Advanced Nutrients conducted extensive research to develop an enzyme product that has a stable shelf life (18 months). We analysed all our competitors products and found that several had totally inactive enzymes due to their very short shelf life. Enzymes are measured in units of activity - Sensi Zym has the highest units of activity, in fact, three times as much as our nearest competitor. All the competitors enzyme products are made for breaking down of dead root material. Sensi Zym does this as well but also provides enzymes that are a catalyst for total plant and root development.

Directions:

Sphagnum Moss & Soil: Mix 5 mL per Litre (1 tsp per quart) of water for every watering. Use weekly during the entire vegetative & flowering cycles.

Hydroponics:

Mix 5 mL per Litre (1 tsp per quart), into nutrient reservoir. Use weekly during the entire vegetative & flowering cycles.
