

Hesi pH + Plus growth and bloom

**Corrects the pH value of
food solutions for plants
on hydro and coco.**

DANGER

Corrosive 50% potassium hydroxide

Hesi pH+Plus

Increases the pH level in food solutions for plants in growth and bloom.

The pH value of food solution is very important. A pH level too high stimulates the creation of insoluble compounds, a pH level too low damages the roots.

Optimal value: pH 5,8 to 6,2

Use: After adding all fertilizers, measure the pH level in the bin.

When the pH level is too low, dose with Hesi pH+Plus. By first use: start with small amounts (drops if necessary), note down the right dosage for later use.

Hazard and Precautionary statements

- H302** Harmful if swallowed.
H314 Causes severe skin burns and eye damage.
P260 Do not breathe dust/fume/gas/mist/vapours/spray.
P280 Wear protective gloves/protective clothing/eye protection/face protection.
