

# DARK BOX TOWER

DBT120: 120x120x235cm  
DBT145: 145x145x235cm  
DBT240W: 240x120x235cm  
DBT200: 200x200x235cm  
DBT290: 290x290x235cm

## Instructions

- Step1. Assemble metal poles & all corners as metal frame diagrams shown in page-2. **To avoid tent cover's damage, it is very important that you check all the poles are pushed fully into each corner joiner.**
- Step2. Un-zip the zipper system all the way, but leave the zippered side windows or back doors closed.
- Step3. To wear tent cover onto the metal frame more easily. You may lie the metal frame 90 degree down. Start with tent's roof. **(for 240x120x235cm, 200x200x235cm, and 290x290x235cm, you can start with tent's base.)** Snugly and carefully fit tent cover onto four corners of top frame like pic A.
- Step4. Put the base of tent cover beneath metal frame. Make sure four sides of tent's floor locate snugly as pic B.
- Step5. Close the zipper system up carefully. You may have to push upright poles a little to cross the corners over as pic C.
- Step6. Attach water-proof tray with its Velcros onto the metal poles, hang shallow/ deep bars on, use Nylon fabric straps to hang reflectors or carbon filters. Done!
